MAINTENANCE OF POWER ANTENNA AND WIPER BLADES

APPLIED VEHICLE(S): All with Power Antenna; All Vehicles [Wiper Blades].

SERVICE INFORMATION

I. Maintenance of Power Antenna

It is recommended that the Power Antenna rod, in its extended position, be periodically wiped with a **clean, soft, dry cloth**. This is the most current information from the factory concerning proper periodic maintenance of the Power Antenna.

II. Maintenance of Wiper Blades

1. To clean the rubber wiper blades, it is recommended to use a **clean, soft, wet cloth** [the cloth should be moistened with washer liquid].
2. Before lowering the wiper blades onto the glass, it is advised to first clean the glass area swept by the wiper blade. Use an appropriate, commercially available glass cleaner and **either** paper towels or a lint-free towel.

NOTE: If the vehicles you service are subject to ice and snow formation on the front or rear windshields, you may recommend to your customers that wiper blade effectiveness, during these environmental conditions, may be optimized, if both snow and ice are removed prior to operating the wiper system(s).
